

ZEN DRIVING TRAINING SIMULATOR (ZEN DTS®)

ZEN DTS® is a versatile indoor system that imparts basic as well as advanced driving skills. The simulator is ideal for starters and drivers of different experience levels.

The simulator facilitates training in a 'to scale' vehicle cabin with actual indicators and controls, thereby creating a realistic driving environment. The simulator can be manufactured for both Left and Right Hand drives. The basic system is supplied with an Instructor Station and a Driver Station.

Features:

- Contains 3D computer generated scenarios with a 180° view.
- Realistic cabin of light/medium/heavy vehicle.
- Six degrees of freedom Motion Platform.
- One Instructor Station can control up to 10 Driver Stations.
- Cuts down training costs, wear & tear of vehicle and eliminates casualties.
- Simulates realistic motion, visuals and sounds.
- Allows centralized or individual trainee control by instructor.
- Offers training under different environmental conditions.

Interface

Training is imparted through the state-of-the-art 3D visualization software. To make trainees skilled at handling the system crucial guidance is at hand with the Instructor monitoring the training 'live'.
